

# Put an END to REMAKES

Recommended  
L-Code: L5671

Patent Pending

The **4SN1** (Four Systems in One) by Adaptive Prosthetics and Orthotics, LLC is a multipurpose lightweight 4-hole socket adapter. The four socket systems (pin/locking, lanyard, valve suction and conventional) can be interchanged on the same socket by changing the insert. A commercially available shuttle lock and expulsion valve is compatible with the **4SN1**. The ability to switch socket systems reduces remakes, saving time and money. The **4SN1** increases client satisfaction because the client can choose what system works best for them.

**4SN1** fabrication is easy with the **4SN1** fabrication kit. The **4SN1** can be thermoformed or laminated. The euro 4-hole design has the maximum compatibility with available endoskeletal componentry.

**1.** How can the 4SN1 adapter solve the distal milking problem with pin/locking systems on the below knee prosthesis?

**Answer:** Switch to a valve suction system by removing the pin/locking system and adding the valve suction insert and valve.

**2.** How can the 4SN1 adapter solve the problem of difficult donning of a pin/locking system on an above knee prosthesis?

**Answer:** Switch to the lanyard system. Donning is easy and the patients can pull themselves into the socket.
