

Laminates and convenience can finally go hand-in-hand.

A new modern design approach inspired us to combine the conveniences of a modular system, with the rigidity and lightweight characteristics of composites, to create a user friendly laminated system. Components can now be easily detached from the orthosis for ease of fitting, adjustment and replacement. This is achieved by fabricating the laminated sections of the orthosis around the metal components and attaching them with standard screws. Our **Modular Laminated Lower Limb Orthoses** are your opportunity to provide your patients with the latest innovations in materials, design and convenience.

FEATURES

- Lightweight - KAFO/AFO weigh 2.6/1.5 lbs. respectively.
- Convenience - components can easily be detached for ease of fitting, adjustment and replacement.
- Rotational control (OOS) and non-rotational control models available.
- Cosmetically appealing, streamlined design.
