

# Dynamic Bracing

## Bledsoe Braces for OsteoArthritis

We design each brace to make sure it fits your level of OA. Bledsoe has a brace suited to your specific needs, designed for your comfort.

**Dynamic unloading** opens the joint only when the leg is extended and the most pain relief is needed. No pressure is applied while your leg is bent for sitting or driving a car.

**Pull technology** disperses pressure across the leg and removes direct pressure from the affected joint.

**Ligament Stability** for OA patients who also suffer from ligament instability issues. (Available in most models.)

**Lightweight materials**, such as magnesium, reduce weight and maximize patient comfort.

**Durable materials**, such as aluminum, can be worn during rigorous activities.

**Quick-release** buckles that allow for quick application and removal of the brace.
