

THE ALTERNATIVE!

TOUGH - SAFE - LIGHTWEIGHT - LESS ITCH - BETTER SATURATION

COYOTE COMPOSITE

A great alternative to itchy, expensive carbon fiber braid! Coyote Composite, made from basalt filament is a safe, tough material for composite sockets and AFOs. Also easy to cut and finish compared to other materials.

- LESS EXPENSIVE
- LESS ITCH THAN CARBON
- EXTREMELY DURABLE
- STRONG AND LIGHTWEIGHT
- FINISHES SMOOTH AND EASILY
- USES TYPICAL PROSTHETIC RESINS
- NOT AN INHALANT RISK
- INERT, NON-CARCINOGENIC AND NON-TOXIC

BRAID Our proprietary braid was designed to be used in equivalent amounts to carbon. Coyote Composite is more flexible than carbon (we consider this to be an advantage).
