

Goin' to the Show

New Coyote products

Will you be in Leipzig for OTWORLD? We will, and we can't wait to show off the innovative new products we've been working on!

Be the first to get a sneak peek at our **Dynamic Composite Strut afo** at the Coyote Booth, USA Pavilion Booth B25a.

Proximal Lock

Designed to control rotation, our newest zero-clearance lock is simply easier. The larger flexible liner attachment is easier to roll on, and distributes more pull. It's easy to install and easy to doff. Even better, you can use the distal adaptor of your choice.

Easy-Off Lock

Our newest vacuum-compatible lock combines a pin with suction. A vacuum system can also be used. Lever design makes for easy doffing, and improved seals provide more holding power.
