

NEW AND **EXCLUSIVE** ONLY AVAILABLE FROM FROM FABTECH:

10x the impact strength
and 30% savings
over traditional carbon fiber.
Easier to work with
and non-toxic means
no more itch.

INTRODUCING THE NEXT EVOLUTION IN COMPOSITE FIBER:

Synthex™ Advanced Composite Fiber by Fabtech Systems is a new and exciting military grade fiber advancement. Synthex fibers are perfectly balanced for use in Prosthetic & Orthotic composite applications. In fact, Synthex offers 10 times the impact resistance over carbon with half the stiffness! And you'll use fewer materials! with Synthex.

Synthex fiber contains no sizing or glues. Because of this, Synthex lays down more uniformly and smoother than carbon or glass. Synthex fibers are also significantly lighter and lay down flatter. Best of all, Synthex does not "micro" fiber when being ground, keeping your lab cleaner and eliminating composite itch.

It's as simple as black & white.
