Intelligent Design for Precision Performance

Microprocessor-Controlled System
Real-time responding sensors detect user’s changes in activity (walking vs. standing vs. sitting) to automatically adjust the vacuum pressure.

Unparalleled Quietness and Comfort
Not only does iQ operate at an extremely quiet noise level, eliminating user embarrassment and annoyance, it also automatically adjusts vacuum levels based on the patient’s activity…imagine a comfortable sitting feature.

Prosthetist and User App
Streamlined set up, monitoring, customization and cadence report are a touch away with the Clinician and Patient App.
