

Give your practice the competitive edge.

Over 700 orthotists and clinicians now offer a prescription that can provide an immediate, substantial improvement in the gait of patients with foot drop. Using sophisticated sensor technology, WalkAide® collects gait pattern data, analyzes and optimizes a program which not only facilitates normal movement, but inhibits development of compensatory patterns. The self contained, single piece unit is fully customizable and easy to use.

Add the WalkAide® to your clinical offering with minimal investment and training. Contact us at 888-884-6462 or 512-961-3500 to see about training available near you, and then we'll post your information on our Website and direct patients seeking the WalkAide solution to your office or clinic. Don't miss out on this breakthrough opportunity.

New Canadian Courses Available in October
