

Liner-Liner™ Prosthetic Sock

Knit with the magic of silver.

**A new prosthetic sock
engineered to be worn
under a liner, next to
the skin.**

Relieves skin shear

Transports heat
and moisture away

Odor
Silver ions
X-STATIC working

Solutions that fit.

Building on over 80 years of medical textile innovations, Knit-Rite brings silver's antimicrobial and therapeutic characteristics to the O&P community again with a unique new interface engineered to be worn under a liner, next to the skin.

Literally a liner for a liner, the thin, high-stretch material allows a degree of skin grip, while relieving skin shear irritations and improving hygiene and comfort – common issues for amputees who wear liners as the primary interface.

Constructed with X-STATIC® – The Silver Fiber™ from Noble Fiber Technologies, the Liner-Liner™ Prosthetic Sock fights bacteria and odor, and also helps transport heat and moisture away from the limb. The washable interface keeps liners cleaner, providing a healthier environment where skin irritations are less likely to occur.

And you can count on Knit-Rite's reputation as a medical textile innovator to bring you new products that are field tested and proven beneficial to amputees, while offering the advantages of an easy to fit product requiring fewer sizes to fit most wearers. Because it is fashion knit like other traditional tapered prosthetic socks, cost factors and billing recommendations are the same.

Call Customer Service or your sales representative today for more information on this and our other revolutionary silver products.
