

# Introducing the medi Panthera CF I carbon technology-made in Germany.

Circle # 196 on Readers' Service Card

Combining the comfort of a K2 foot with the dynamics of carbon fiber, the medi Panthera CF I boasts a continuous carbon spring for optimal energy storage and return with a smooth and harmonious rollover for the unrestricted outdoor walker.

*Polymer heel cushions heel strike while carbon springs separate creating gentle onset of anterior pull.*

*Carbon springs converge.*

*Springs contact each other: exponential increase in energy storage and return at push-off.*

Contact your local medi representative to see how the new medi Panthera CF I redefines what you expect out of a K3 foot.
