Independent Practitioners Rank PEL As The Top O&P Distributor

A recent distributor study revealed practitioners prefer PEL over competitors for many reasons. The study asked practitioners to rate the major O&P distributors on service, greatest overall value, and website. Practitioners rated PEL as the distributor that provides the greatest overall value of service and price. They also rated PEL significantly higher in service, products, and website dimensions. Based on these results, we can say with confidence that practitioners view PEL as the leading O&P distributor.

If you are looking for a better relationship with your distributor, try PEL. You will find our website and personal service second to none.

Transfer Patterns Offer Customization

Transfer patterns are available for customization of orthoses, straps, and other orthotic applications. Personalizing a device can allow for greater acceptance and a happier, more satisfied patient. We offer heavy and standard transfer paper.

Heavy transfer paper performs well on larger thermoplastic sheets, and offers less opportunity for wrinkling, tearing, and rips/tears, and less disruption of patterns during the application process. The variety of patterns and colors are perfect for children and adults. Standard transfer paper is available in several patterns and solid colors. WillowWood acquired American Plastex in 2012 and O&P Enterprises in 2014.

Switch Liners Without Switching Sockets

WillowWood is the only manufacturer offering liners that have a range of interface materials and profiles that retrofit with each other, allowing an amputee to use the same socket with different liners.

The key to retrofitting is the liner profile. The transibial Uniform profile is offered in hybrid gel and our silicone blended with Outlast® heat management technology. The transtibial Progressive and transfemoral Symmetrical profiles are offered in hybrid gel, silicone, and silicone with Outlast. The benefit of retrofitting liners is that clinicians and patients can avoid the time-consuming and costly process of creating multiple sockets.

The Future of Ankle Bracing is Here

Introducing the first prefabricated AFO that can be fully customized and formed to the patient to provide functional stabilization of the ankle-foot complex and address bony abnormalities, chronic instability, and post-trauma rehabilitation.

The Exos® Free Motion Ankle presents a new orthopedic choice with a treatment option that is moldable, reformable, removable, and adjustable. This leading-edge treatment uses revolutionary technology, allowing a clinician to custom fit a brace within 30 minutes—minimizing time and cost while providing immediate results for the patient.

Raptor Sky Hook

The Raptor Sky Hook is the first commercially available prosthetic terminal device for both indoor and outdoor rock climbing recreations. The Raptor was designed with input and field testing by Jon Sedor, a nationally recognized, one-handed climber. The Raptor is slim and strong with multiple functional features that include:

- A solid titanium plate support body and stainless wrist adaptor system
- A friction-adjustable rocking action hook that adapts to various approach angles
- Three replaceable, recyclable tips (two polyurethane and one shapeable brass)
- Lightweight (about 6 oz. or 170g)
- Universal handedness
- Available in limited quantities now!
