

WEATHERING THE AUDIT STORM

OPIE's Documentation Tools Stand Up to the Test.

OPIE connects every member of your O&P practice so that you can manage the complete operation. From scheduling to clinical through fabrication into purchasing and through the billing process, the logical OPIE workflow standardizes operations to support accreditation and compliance.

- OPIE clinical documentation provides the O&P profession's most comprehensive clinical evaluation, documentation, and patient outcome gathering system available today.
- L-Code Intelligence creates rules and alerts based upon codes, payers, K levels and more to help reduce coding and billing errors.
- The most innovative patient notes and integrated in-chart note dictation process in the profession.
- Provides tools to help meet Facility Accreditation standards for Patient Care and Management.

Simply wanted to tell your staff how much I appreciate OPIE software. Using this software makes my job so much better knowing I can leave a patient room having completed everything for my patient and moving to the next without the monkey on my back of unresolved patient care.
