OPIE & QUALITY OUTCOMES...
Creating a Patient-Centered Practice

OPIE Software is proud to partner with Quality Outcomes to measure O&P patient satisfaction in a new, integrated manner that leads to an easy-to-use, improved data collection system for the independent O&P profession.

- Integrated tools allow OPIE practices to communicate electronically with patients to get their direct feedback.
- Systematic approach to gathering Patient Satisfaction data increases the visibility and importance of this key factor in O&P patient care success.
- OPIE users are provided with the Basic version of the Quality Outcomes system at no additional cost.

OPIE users are now driving the O&P profession in creating profession-wide benchmarks and standards for patient satisfaction. We are in the process of going from providing anecdotal evidence to providing a unique body of information that can begin to stimulate scientific investigation.

D. Scott Williamson, MBA, CAE
President of Quality Outcomes
