

The Wise Choice for Diabetic Wound Care

Wound Healing Orthosis
Heel Relief

Wound Healing Orthosis
Forefoot Relief

“I have successfully incorporated the OWLS program into my diabetic wound practice as a viable alternative to total contact casting in patients with plantar heel and forefoot ulcers. The custom orthoses reduce shear forces to the foot while stabilizing the foot and ankle complex and reducing pressure to the affected site.”

—Larry A. Suecof, DPM, FAFAS, CWS

Introducing Orthomerica’s Wound & Limb Salvage (OWLS) Program

The OWLS Program is a culmination of ten plus years of clinical orthotic development—treating diabetic ulcers classified Wagner 1-4 with custom orthoses. These orthoses will complement the ongoing wound therapies & post-operative care being offered at Wound Centers worldwide.

WHO Heel/Forefoot Indications

- As a stage two device when daytime ambulation is desired
- Used in conjunction with the ADO night time orthosis
- Used as a post-operative walking orthosis
- Post TAL Procedure
- Wagner 1-3 wounds where un-weighted ambulation is desired

ADO Indications

- Wagner 1+ ulceration of the heel. (Can be constructed to accommodate malleolus and forefoot wounds.)
- Post-operative wound care. ADO easily accommodates a Wound VAC
- Post-Calcanectomy

WHO Mid-foot/Walking Indications

- Relief for midfoot ulcer during ambulation
- Post-TAL with plantar ulcer
- Immediate post-op forefoot or midfoot amputation
- Immediate post Symes amputation
- Post Charcot support and Rocker Foot support
- Post-Calcanectomy
