

Find Your Balance!

With the Balance Copolymer Liner!

Designed for low to moderate activity level transtibial amputees, our new 6Y93 Liner keeps your patients in Balance in more ways than one.

The user-friendly, heat-moldable copolymer (TPE) material offers great protection against socket forces for both cushion and locking liners, while encapsulated medical grade mineral oil keeps skin supple and moisturized. Its unique shape is designed with balance in mind too, with differing wall thicknesses to provide 6 mm of cushioning and reduced shear forces where your patients need it—and 3 mm of anti-bunching flexibility where they don't.

Add the color-coded fabric, which makes it easy to correctly apply, and we've got your patients (and you) covered. Find out more about how you can get your patients in Balance today, call 800.328.4058.
