# Time to make your move

**The new Triton VS (Vertical Shock) foot from Ottobock.**

Patients will love the smooth ride! The innovative triangular design of the Triton VS allows the foot to function as a flexible unit, thanks to a series of carbon springs connected via a high performance base spring. The 2-in-1 functional ring provides vertical shock absorption and torsional movement for reduced forces on the limb. Combining this with the specially formed split forefoot ensures a consistently high level of stability, especially on uneven surfaces.

Great footshell options, too: two heel heights, two colors, standard and narrow widths, all with sandal toe. Put it all together — it's a winner!
