Quality for life

Michelangelo is the natural choice

Natural design and incredible freedom of movement

Give your patients the intuitive, responsive functionality of Michelangelo that brings them closer to a natural hand than any other myoelectric. The Michelangelo difference is more than cosmetic. It offers seven different hand positions and a powerful grip function. Along with its flexible wrist, unique fingertips, and electronically movable thumb, Michelangelo can open up a whole new world of possibilities for your upper limb patients. Ask your local sales rep to trial a Michelangelo today and see how it has become the natural choice.
