

Seeing is Believing

Many manufacturers claim that their liner prevents vertical stretch. But the **Otto Bock 6Y80 Transfemoral Liner** actually delivers. Consequently, your patients have the fit you (and they) want without the elongation that can cause pistoning and other problems.

And the benefits don't end there. Horizontal stretch enables easy donning. In addition, we've built in a reference line to ensure that the liner is donned consistently, and that any custom trim lines match your socket. And, don't forget, our 6Y80 also includes a one year warranty!
