

Light as a feather
Designed for durability

The WalkOn™ AFO

**You couldn't ask for a lighter,
harder-working solution for drop foot.**

Even though the WalkOn AFO weighs only 7.2 ounces, it's no featherweight when it comes to durability. The sleek, low profile design features a posterior strut, which makes it easier to fit and more comfortable than AFOs with an anterior strut — proving that sometimes less really is more.

A better design helps your patient's gait, too. Because the WalkOn doesn't interfere with the gait cycle, it allows a more fluid rollover during stance phase.

To find out how you can lighten things up, contact your Otto Bock Sales Representative at **800.328.4058**.

No sweat. Phase change materials in the strap balance temperature.

No worries. The carbon fiber calf band is reinforced with an ultra-high strength, flexible polyethylene fiber for durability.

No extra padding needed. The posterior strut provides a comfortable fit for all patients.
