

*"I can't see the metal joints anymore in my shoes and my new braces are lighter and easier to run with."*

## DRAKE'S PATIENT INSPIRED SOLUTION

For over a year, Drake has been wearing Ultraflex Adjustable Dynamic Response™ (ADR™) AFOs to improve gait characteristics associated with diplegic CP. His therapist reports, "increased gait speed — more effective push-off with allowed PF, increased stride length due to increased hip extension, improved heel strike bilaterally, and improved weight shifting bilaterally." For the past few months, Drake has been wearing his new, lower profile (40% lighter, 30% smaller) ADR™ braces. His new Ultraflex ADR™ AFOs are great for all the activities he enjoys, like running, climbing, and biking. Drake reports, "I feel more confident and safe with my Ultraflex braces. I am taking bigger steps and walking faster."
