CRANIAL HELMETS

Create cranial remodeling orthoses with OMEGA Tracer and the OMEGA Scanner. The OMEGA Scanner, a newly-designated Class 1 laser device, allows clinicians to easily and safely scan a child's cranium. The process is faster than casting and less stressful for children and parents. If desired, clinicians may modify cranium shapes with OMEGA Tracer software. Becker Orthopedic, the official OMEGA Partner for cranial remodeling orthosis fabrication, accepts modified and unmodified shape files.

OMEGA Tracer - the leader in CAD/CAM for the O&P industry
