CHANGING THE LIVES OF AMPUTEES

Alpha SmartTemp Liners will help keep patients comfortable all day. By uniting Alpha silicone with Outlast® technology—originally developed for NASA and exclusive to WillowWood—Alpha SmartTemp Liners absorb heat as your patient’s body warms up and releases the stored heat as your patient cools down. Patient comfort is achieved when skin temperature and the liner temperature are balanced.

“The Alpha SmartTemp is the perfect liner. You’re never cold in the winter, but you’re never hot in the summer. It’s perfect.”

Dean, transtibial amputee for 8 years & outdoorsman, carpenter, father

“This has been the best system I’ve been in for temperature control, for comfort. I would recommend it to anybody who’s looking for a liner that’s going to feel as close as they can to what they had before they lost their leg.”

Chad, transtibial amputee for 9 years & teacher, coach, farmer, father
